Art Unit: 1712

This action is in response to the request for continued examination (RCE) and amendment filed on September 17, 2003.

Claims 18-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 7.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-14, 16 and 17 rejected under 35 U.S.C. 102(b) as being anticipated by Miyabayashi '890. The reference teaches coating agents comprising non-aromatic polyester polyol and blocked polyisocyanate in amounts required in the claims. See Example 8 and Tables 1 and 3. The polyester polyol is prepared from (cyclo)aliphatic polyol and aliphatic dicarboxylic acid and has an acid value of 3.8, hydroxy value of 446.1, number average molecular weight of 623 and a hydroxyl functionality of 5.

Art Unit: 1712

Claims 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyabayashi '890. The reference is discussed above. Additionally, dicarboxylic acids include dimer acid. See col. 4, line 57. It would have been obvious use a combination of a dimer acid and another dicarboxylic acid such as adipic acid used in Example 8 of the reference for their intended purpose as the dicarboxylic acid component of the polyester polyol in the coating compositions of Miyabayashi. See *In re Kirkhoven* 205 USPQ 1069 (CCPA 1980).
